

Family RATABOURIDAE

Body elongate, cylindrical. Head moderate or small. Snout rather short. Eye small or obscure. Mouth cleft reaches below or behind eye. Teeth pointed, conic, recurved, uniserial in jaws and on vomer. Tongue not free. Hind nostrils as subtubulate opening near middle of front border of eye and front nostrils tubular near snout end. Gill openings narrow, inferior or partly inferior slits. Heart some distance behind gills. First branchial opening in pharynx wide, following narrow slits. Body scaleless. Dorsal and anal confined to tail, confluent with caudal, rather low or reduced to low fold which furnished with rays only terminally. Pectorals short, vestigial or absent.

Small eels of brackish or salt water, living near shores, on reefs or in estuaries. They are usually found buried in sand, mud or gravel of the bottom. Indo Pacific.

Genus Rataboura Gray

Rataboura GRAY, Zool. Miscellany, Feb. 19, 1831, p.

9. Type Muraena rataboura BUCHANAN HAMILTON, tautotypic.

Moringua GRAY, Zool. Miscellany, Feb. 19, 1831, p. 9.

Type Moringua linearis GRAY, monotypic.

Pterurus SWAINSON, Nat. Hist. Animals, vol. 2, 1839, p.

334. Type Pterurus maculatus SWAINSON, designated by

SWAIN, Proc. Acad. Nat. Sci. Philadelphia, 1882, p.

283.

Pachyurus (not AGASSIZ 1829) SWAINSON, Nat. Hist. Animals,

vol. 2, 1839, p. 335. Type Pachyurus linearis GRAY,

monotypic.

Ptyobranchus MC CLELLAND, Calcutta Journ. Nat. Hist., vol.

5, 1845, p. 199. Type Ptyobranchus arundinaceus MC

CLELLAND, designated by JORDAN, Genera of Fishes, pt.

2, 1919, p. 220.

Apthalmichthys KAUP, Archiv Naturg., vol. 22, pt. 1,
1856, p. 68. Type Apthalmichthys javanicus KAUP.

Aphthalmichthys BLEEKER, Atlas Ichth. Ind. Neerland.,
vol. 4, 1864, p. 16. Type Apthalmichthys javanicus
KAUP,

Pseudomoringua BLEEKER, Atlas Ichth. Ind. Neerland.,
vol. 4, 1864, p. 14. Type Moringua lumbricoides
BLEEKER, orthotypic.

Stilbiscus JORDAN and BOLLMAN, Proc. U. S. Nat. Mus.,
vol. 11, 1888, p. 549. Type Stilbiscus edwardsi
JORDAN and BOLLMAN, orthotypic.

Gordlichthys JORDAN and DAVIS, Rep. U. S. Fish Comm.,
pt. 16, 1888 (1892), p. 644. Type Gordlichthys
irretitus JORDAN and DAVIS, orthotypic.

Body very slender, worm like, depth 30 to 100, tail much shorter than body. Mouth small, weak. Teeth feeble, acute, **very** small, usually uniserial, sometimes irregularly biserial on vomer. Gill openings small. Vertical fins usually rudimentary or covered by skin, often may form short fold around end of tail. Sometimes dorsal and anal may protrude higher with rays visible anteriorly and posteriorly with mere low fold of skin in middle.

Analysis of species

- a¹. Rataboura. Dorsal and anal with visible rays anteriorly lower or scarcely more than low fold medially.
- b¹. Distance between vent and anal origin somewhat more or much less than half head length.
- c¹. Distance of dorsal origin from anal origin much less than half of head length.
- d¹. Distance between anal origin and vent $1/2$ to $3/4$ in head; pectorals 5 to 7 in head.
- e¹. Vomerine teeth biserial; distance between anal origin and vent $1 \frac{1}{3}$ in head. cagayana.
- e². Vomerine teeth uniserial; distance between anal origin and vent $1 \frac{3}{4}$ to 2 in head. raitaboura.
- d². Distance between anal origin and vent $1/4$ or less in head; pectoral 4 to over 5 in head. floresiana.
- c². Distance of dorsal origin from anal origin $1/2$ of head; distance between anal origin and vent less than $1/3$ of head; pectoral $7 \frac{1}{2}$ in head. robusta.

- c³. Distance of dorsal origin from anal origin more than half head length.
- f¹. Eye 2 in snout. linearis.
- f². Eye nearly long as snout. ocularis.
- b². Distance between vent and anal origin more than head length. bicolor.
- a². Aphthalmichthys. Dorsal and anal as reduced or vestigial low folds, usually as few weak short rays only at extreme tip of tail.
- f³. Depth 34 to 40; head $8 \frac{4}{5}$ to $9 \frac{9}{10}$. macrocephala.
- f⁴. Depth 40 to 58; head $10 \frac{1}{2}$ to $13 \frac{1}{2}$. abbreviata.
- f⁵. Depth 67 to 95; head 12 to 22. javanica.

Rataboura oculis new species

Depth $45 \frac{1}{4}$; head $10 \frac{1}{5}$, $7 \frac{1}{6}$ to vent, width $5 \frac{1}{5}$ in its length; tail 2 in combined head and trunk. Snout $7 \frac{3}{4}$ in head; from snout tip; eye $9 \frac{7}{8}$, $1 \frac{1}{5}$ in snout, equals interorbital; mouth cleft reaches opposite eye center, length $4 \frac{3}{4}$ in head from snout tip; teeth simple, conic, uniserial in jaws; interorbital $9 \frac{7}{8}$, level. Gill opening $10 \frac{3}{4}$, equals interspace.

Dorsal inserted space behind vent equal to head length; anal inserted behind vent space equal to $\frac{1}{3}$ head; caudal obtusely rounded, rather broad; pectoral $4 \frac{3}{5}$.

Brown, paler or lighter below. Eye gray. Fins all pale brown.

Diagnosis. Apparently well distinguished by its large eye, short pointed muzzle and space between vent and dorsal origin subequal with the head.

Type No. U. S. N. M.

1 example. Tifu Bay, Bouro Island, Dutch East Indies.
December 10, 1909, Length 219 mm.

Rataboura bicolor (Kaup)

p. 70. Timor (Leyden Museum); Cat. Apodal Fish
Brit. Mus., 1856, p. 107 (copied). -- BLEEKER,
Atlas Ichth. Ind. Neerland., vol. 4, 1864, p. 15,
pl. (3) 147, fig. 1 (Timor). -- GÜNTHER, Cat. Fishes
Brit. Mus., vol. 8, 1870, p. 91 (Timor). -- GÜNTHER,
Journ. Mus. Godeffroy, vol. 9, pt. 17, 1910, p. 405
(Kandavu; New Pommerania). -- WEBER and BEAUFORT,
Fishes Indo Austral. Archipelago, vol. 3, 1916, p.
338, fig. 165 (East Flores; New Britain).

Apthalmichthys bicolor FOWLER, Mem. Bishop Mus., vol.
10, 1928, p. 47 (compiled).

Depth $38 \frac{1}{3}$ to $49 \frac{3}{4}$; head 12 to $12 \frac{7}{8}$, $8 \frac{1}{8}$ to $8 \frac{1}{5}$ to vent, width $5 \frac{1}{5}$ to $5 \frac{1}{4}$ in its length; tail 2 to $2 \frac{1}{4}$ in combined head and trunk. Snout $6 \frac{1}{2}$ to $7 \frac{1}{4}$ in head from snout tip; eye 12 to $12 \frac{1}{2}$, 2 to $2 \frac{1}{4}$ in snout, $1 \frac{3}{4}$ to 2 in interorbital; mouth cleft reaches opposite hind eye edge, length 4 to $4 \frac{1}{3}$ in head from snout tip; teeth simple, conic, small, uniserial in jaws and on vomer, little larger anteriorly, rather few; interorbital $8 \frac{2}{3}$ to 9, low, nearly level. Gill opening 11 to $11 \frac{2}{3}$, subequal with interspace.

Lateral line distinct.

Dorsal origin behind vent variably from space equal to postocular length of head to space little greater than total head length; anal opposite dorsal though usually little shorter or lower; caudal forms rather prominent short point at end of tail; pectoral 6 to $6 \frac{4}{5}$ in total head length.

Brown above, paler or whitish below. Iris gray. Dorsal, anal and pectoral pale to whitish. Caudal deep or dusky brown.

East Indies, Philippines, Melanesia, Polynesia.

D. 5561. Teomabal Island (NW.), S. 36° W., 0.2 mile (N. $5^{\circ} 50' 45''$ E. $121^{\circ} 1' 15''$), Jolo Island and vicinity. In 10 fathoms. September 18, 1909. Length 235 to 255mm. 2 examples.

Rataboura macrocephala (Bleeker)

Aphthalmichthys macrocephalus BLEEKER, Nederland.

Moringua hawaiiensis SNYDER, Bull. U. S. Fish Comm.,

vol. 22, 1902 (1904), p. 517, pl. 3, fig. 6. Hono-

lulu. -- JORDAN and EVERMANN, Bull. U. S. Fish

Comm., vol. 23, pt. 1, 1903 (1905), p. 86.

Depth $78 \frac{1}{2}$; head $17 \frac{1}{3}$, $12 \frac{1}{3}$ to vent, width 5 in its length; tail $2 \frac{1}{2}$ in combined head and trunk. Snout $6 \frac{4}{5}$ in head from snout tip; mouth cleft 5, extends about 2 eye diameters beyond very small rudimentary eye, which 5 in snout and $3 \frac{1}{2}$ in interorbital; teeth conic, pointed, recurved, uniserial in jaws, rather large anteriorly; interorbital $9 \frac{7}{8}$ in head, convex. Gill opening $10 \frac{3}{4}$, about equal to interspace.

Dorsal and anal as very low rudimentary folds continuous with low or short rounded caudal at posterior portion of tail; no pectoral, though front edge of gill opening with very short or low marginal flap concealing gill opening.

Uniform brown. Iris gray.

East Indies, Philippines, Japan, Micronesia, Polynesia, Hawaii.

8428. Pandanon Island. March 24, 1909. Length 1030 mm.
